APC220 Radio Data Module

2008-09-22

Version: 1.2

Introduction

This APC220 is a highly versatile, low power radio solution that is easy to setup and integrate into any project requiring a wireless RF link.

It is perfect for robotic application which gives you a wireless control. You can connect one of these modules with your MCU through TTL interface. And connect your PC with another APC220 module through a TTL/USB converter

Specification

Working frequency: 431 MHz to 478 MHz

Power: 3.3-5.5V

Current: <25-35mA

Working temperature: -20℃ ~ +70℃

Range: 1200m line of sight (1200 bps)
Interface: UART/TTL

Baud rate: 1200-19200 bps

Baud rate (air): 1200-19200 bps

Receive Buffer: 256 bytes

Size: 37mm × 17 mm × 6.6mm

Weight: 30g

Pin Definition

Pin	Definition	Detail
1	GND	0V Ground
2	VCC	3.3V-5.5V Power
3	EN	Enable the device when leave it disconnected or apply >1.6V Disable the device when apply <0.5V
4	RXD	UART RX
5	TXD	UART TX
6	AUX	UART Signal- Receive (low) Transmit (high)
7	SET	Set parameters (low)

Default Setting

Baud Rate: 9600 bps

Bits: 8

Parity: None

Stop bit: 1

RF Frequency: 431 MHz

Air Rate: 9600 bps

Output Power: 20mw

# Connection

• Connect APC220 to PC

To connect APC220 to PC, a TTL to RS232 or TTL to USB converter is required.

Figure: Connect APC220 to PC via RS232-TTL converter
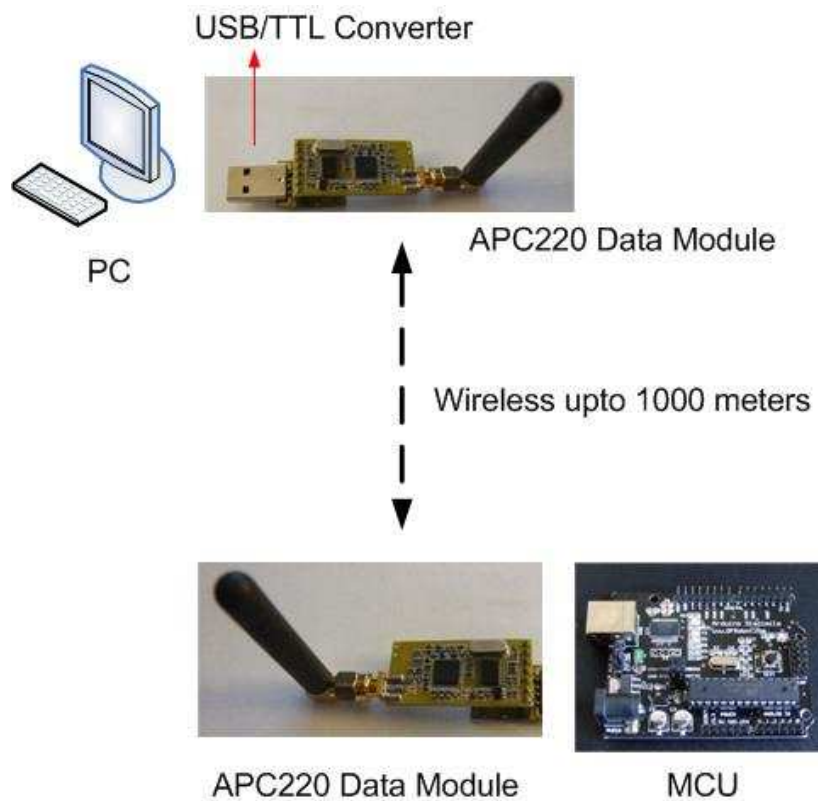

• Connect APC220 to MCU

Any MCU which has TTL port is able to talk to APC220. A diagram is shown below for easy connection.

Figure: Connect APC220 to MCU
- **Connect PC to MCU via APC220**

To connect PC with MCU via APC220, a RS232-TTL or USB-TTL converter is required.

Figure: Connect PC to MCU via APC220

- **Connect PC to PC via APC220**

To connect PC to PC via APC220, two USB-TTL or RS232-TTL converters are required. A diagram is illustrated below.
